

## **STATISTICAL MESSAGE CLASSIFIER**

### **ABSTRACT OF THE DISCLOSURE**

A system and method are disclosed for improving a statistical message classifier.

A message may be tested with a machine classifier, wherein the machine classifier is

5 capable of making a classification on the message. In the event the message is

classifiable by the machine classifier, the statistical message classifier is updated

according to the reliable classification made by the machine classifier. The message may

also be tested with a first classifier. In the event that the message is not classifiable by

the first classifier, it is tested with a second classifier, wherein the second classifier is

10 capable of making a second classification. In the event that the message is classifiable by

the second classifier, the statistical message classifier is updated according to the second

classification.
